NEW YEAR,
NEW SMILE,
NEW YOU!

SYDNEY COSMETIC, IMPLANT AND RECONSTRUCTIVE DENTIST **DR DAVID DUNN** TELLS US HOW COSMETIC DENTISTRY CAN HELP CAPTURE THE REAL YOU WITH A SPARKLING NEW SMILE IN 2011.

The start of the New Year can present an ideal time for instigating change in your life. Why not take the opportunity to have the smile you have always wanted, to feel confident when you look in the mirror and smile, and to know you have an attractive and youthful-looking smile your partner and friends will admire?

Maybe you are missing teeth, would like to get rid of a removable denture or old tooth-supported bridge, have badly worn or discoloured teeth, or oddly shaped and crowded teeth. Perhaps your smile does not 'fit' your face.

In addition, do the gingival or gum tissues around your teeth look healthy, pink and even? Or do you show too

much gum tissue... or too little? These are all common issues related to a 'failing' and ageing smile.

Thankfully with today's modern technologies and techniques all of these issues can be addressed and corrected. So no matter how difficult or impossible you feel it may be to achieve the beautiful smile you've always wanted, it is not beyond you!

Dental implants have progressed rapidly even in the past five years, reducing both the time and cost of treatment and offering even more predictable and long-term treatment solutions. Dental implants can be used to replace missing teeth – from a single tooth right through to those patients

who are missing all of their teeth in one or both jaws.

New implant designs and sophisticated implant planning software, combined with cutting-edge three-dimensional analysis and planning, can enable us to achieve optimal aesthetic, functional and long-term treatment solutions. The results are typically beautiful, healthy and predictable smiles with excellent function.

All-porcelain veneers and all-porcelain crowns and bridges have also revolutionised aesthetic dentistry. It is important however to have a highly skilled and experienced practitioner to understand and know what is the most ideal technology to be used in your individual circumstances. They will be able to provide you with the most superior solution based on the assessment of appearance, function and most importantly the long-term prognosis of your smile and oral health.

Quality, predictable and meticulously planned aesthetic and reconstructive dental treatment requires that the practitioner possess a combination of skills and talents. This includes an artistic appreciation of form, shape and colour as well as a thorough understanding and awareness of the scientific and technical requirements to undertake this type of treatment.

Your final treatment solution is dependent on the skills and talents of your practitioner and the time required in order to undertake this treatment properly for you.

So as you begin 2011, why not consider making the changes to achieve the smile you have always wanted? There are numerous options available to create a new and long-lasting beautiful smile that you can be confident in showing to everyone you meet. **acsm**
